

BALLISTIX® TACTICAL TRACER RGB DDR4

GEN 2: SAME GREAT PERFORMANCE WITH ENHANCED FEATURES

Tactical Tracer Gen 1 and Gen 2 modules both offer high performance with customizable LEDs to give your rig a unique style. The Gen 2 module enhances your visual experience with a full-spectrum RGB default pattern, brighter LEDs, and higher color fidelity. Both modules work with the Ballistix® M.O.D. Utility and ODM motherboard software. However, Gen 2 will offer expanded support for popular LED-controlling software.

FAQ

Q: Will the M.O.D. utility work with Gen 2?

A: Yes! The M.O.D. utility will continue to have the same great functionality in Gen 2 modules.

Q: How do I know if I have Gen 1 or Gen 2?

A: You can identify Gen 1 vs Gen 2 by checking the color of the module when it boots up. Gen 1 will boot up to a default light blue color, whereas Gen 2 will boot to a default RGB pattern.

Q: What if I can't find a match to my existing part number?

A: Your Gen 1 module may have been discontinued, which means it is no longer in production. However, your warranty on your existing modules will continue to be supported.

Q: Does the Gen 2 have Micron E-die?

A: Yes! Although die revisions may change, rest assured that you will have Micron Gaming die on your Gen 2 modules.

Q: What makes Gen 2 better?

A: Brighter LEDs, improved motherboard software support, faster speeds, and tighter latencies.
